

FOGSTREAM

**Professional Software
Development Company**

About Fogstream

Fogstream is an Integrator of IT solutions:
we program, design, train, help our clients
become more effective using **IT technologies**.

Fogstream limited (Hong Kong)
<https://fogstream.company>

13 Years in operations

**100+ different projects and this
is not the limit from**

GMT+3 to GMT+10 our team location

Our Services

Working at Fogstream, our team members always have challenging opportunities to learn and practice the latest technology.

Dedicated Development Team

Our dedicated developers are tailor-made for building, motivating, and managing your custom projects.

Mobile Application Development

We offer iOS & Android native, hybrid, or cross-platform app development.

Website Application Development

Our projects combine front-end, back-end, and architectural abilities, which maximize delivery speed

Enterprise Software Development

We offer iOS & Android native, hybrid, or cross-platform app development.

Geography of delivery

Our Working Models

Project-based

Applied to projects with clearly defined features or functionalities, which will not allow significant changes during the development process.

Team-based

Applied when you agreed on our rate for scaling up a custom team of members with different levels. We charge depending on the time our team spends on your project.

**Health care
(telemedicine)**

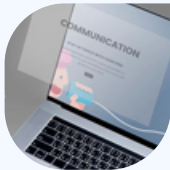

Video streaming

Logistics

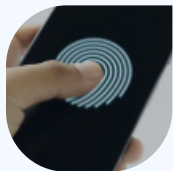

Retail

**Training
and adaptation
of remote personnel**

**Control of personnel
at remote places
of work**

**Control of sensors
and equipment**

Web platform for trading

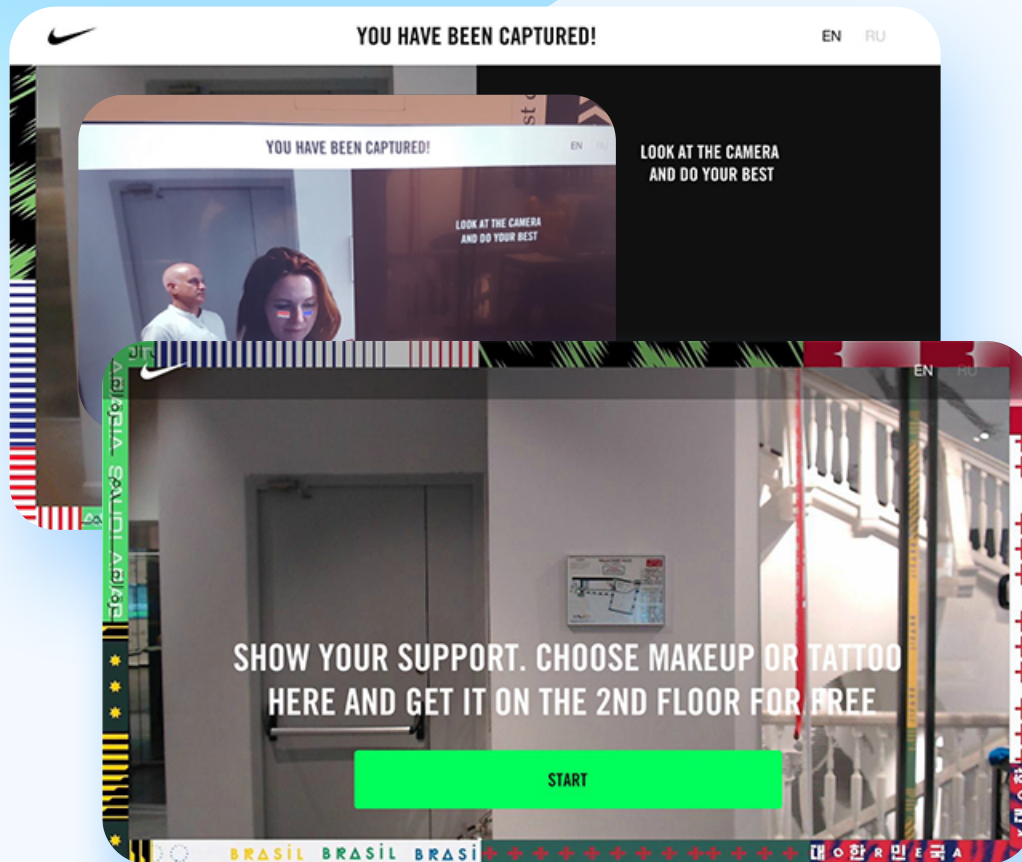

One of our customers is a global broker company operating in more than 150 countries of the world, the volume of clients of which exceeds 673 billion US dollars, and the number of active traders worldwide is more than 145,400.

At their request, we participated in the development of a personal partner account, which became the competitive advantage of the customer.

In the personal account, the user can view detailed reports on all customer transactions, track his profit and payment history. The charts clearly show the growth of a user's business.

Video stream / work with video / AR

Streaming is a way of delivering visual and audio media to users over the Internet. It works by continually sending the media file to a user's device a little bit at a time instead of all at once.

The original media file is stored remotely, or, in the case of live streaming, created in real-time with a remote camera or microphone. This way, the video or audio can play without the user's device downloading the entire file first.

Blockchain lottery project

The screenshot shows a user interface for a blockchain lottery. At the top, there's a navigation bar with a logo, a contract address, and language settings. Below that, a message says "To play, send Ethereum from any services to the contract address or connect to Metamask." The main area displays three lottery cards. Each card shows a lottery number (77, 78, 76), a bank amount, a timer, and a draw type (1st, ALL, 1,2,3). Card 77 shows a 1st prize of 0.000124 Eth. Card 78 has a message: "There are no players in this cycle yet, you can be the first, if no one buys a ticket before the end of the cycle, all funds will be automatically returned to you." Card 76 shows prizes for 1st (0.000066 Eth), 2nd (0.000044 Eth), and 3rd (0.000022 Eth).

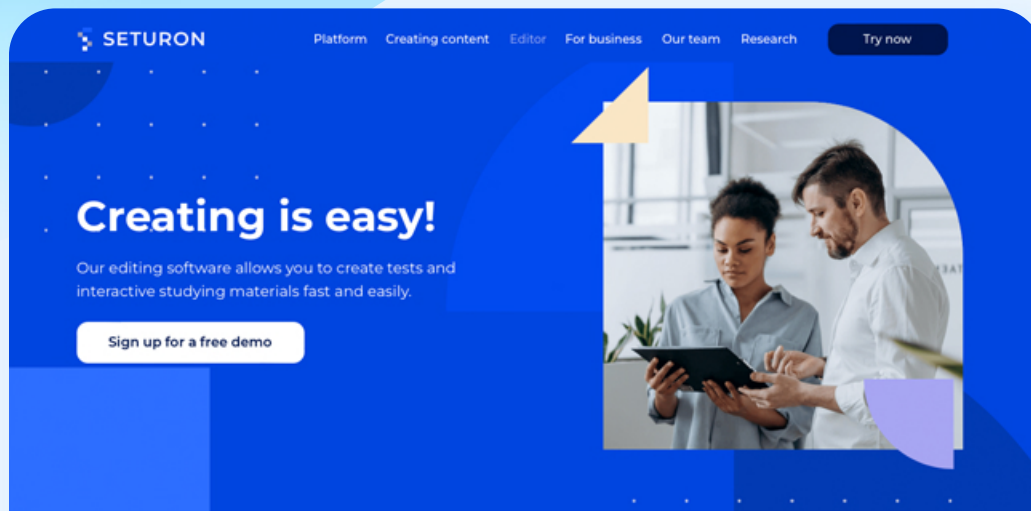

The lottery is one of the most popular forms of gambling, but many people have prejudices about the fair distribution of winnings. The only way to create a clear and fair system for distributing the prize fund today is to make a lottery on the blockchain. At the request of the customer, we have developed a platform for holding lotteries using smart contracts.

The screenshot shows a table of active lotteries. The table has columns for Lottery N°, Ticket price, Bank, Players, Lottery cycle, Time to end, Lottery draw type, and Etherback. There are three rows of lottery data.

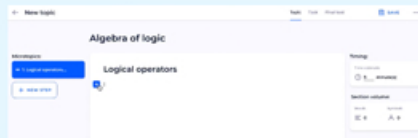

Lottery N°	Ticket price	Bank	Players	Lottery cycle	Time to end	Lottery draw type	Etherback
73	0.000150 Eth	0 Eth	0	30m	00:00:00	1,2,3	0%
75	0.000140 Eth	0 Eth	0	30m	00:00:00	1st	0%
74	0.000130 Eth	0.000227 Eth	2	30m	00:00:00	ALL	0%

Smart contracts are based on blockchain technologies, so the piece of code that describes them is absolutely understandable for all participants in the system. The winner is determined by a random number generator.

Online platform for staff training

Create content in minutes

WYSIWYG-EDITOR

Use pre-made components

To make it easier for users to create content, we

The platform allows you to create a training system on any topic. Now the HR manager not only saves the time that he used to spend on training new employees, but can also immediately select the best based on test results.

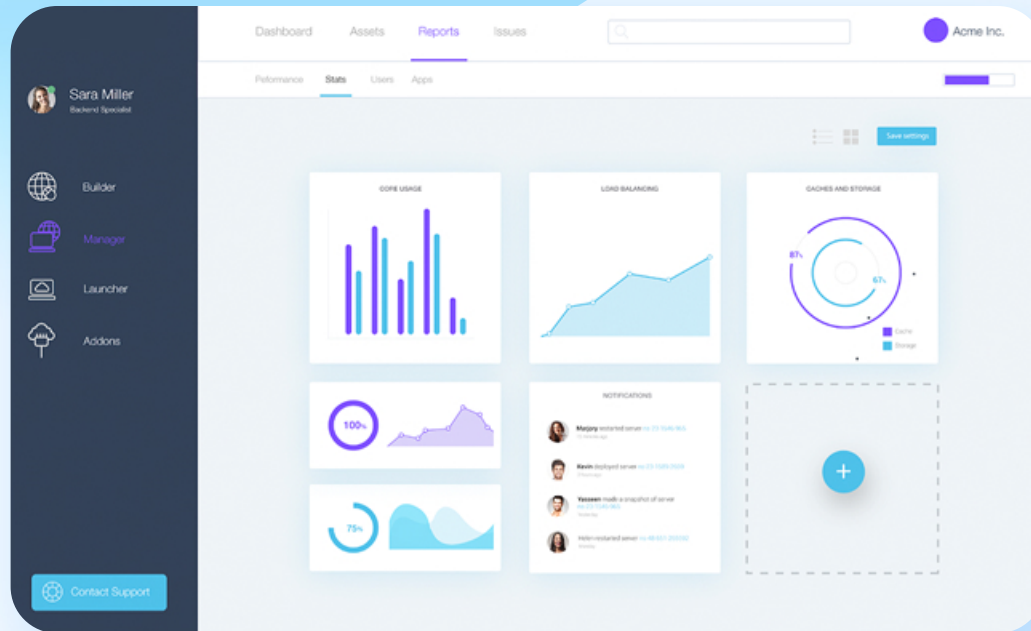

The employer not only simplifies the learning process for all parties and ensures safety, but can also regularly update the course information, keeping it up-to-date

Telemedicine

The system allows you to transfer data to government agencies, transfer data to departments of the clinic and statistics on the work of employees. Accordingly, it helps in making more accurate diagnoses due to a complete picture of the patient's treatment. Also, the system reduces the number of errors due to the input of incorrect data by field workers.

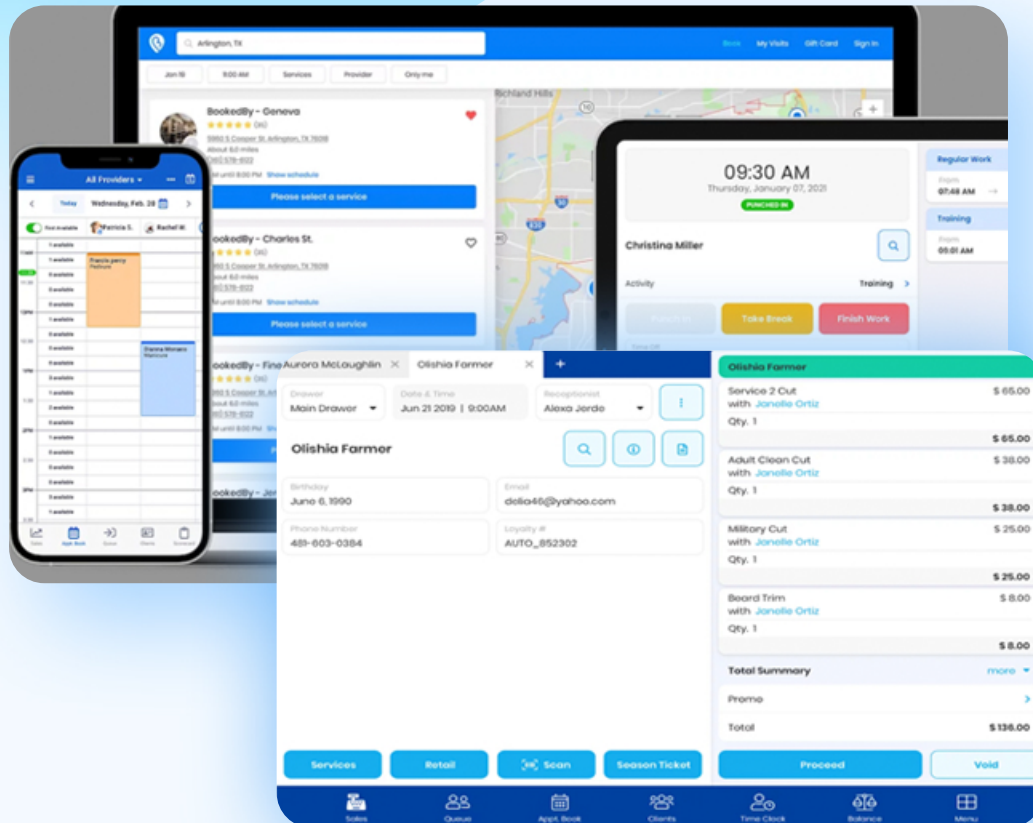

Payments platform

GA Tech is a market leader and preeminent choice for payments in challenging markets worldwide.

Company provide reliable, secure and fast payment gateway solutions to a wide range of businesses around the world.

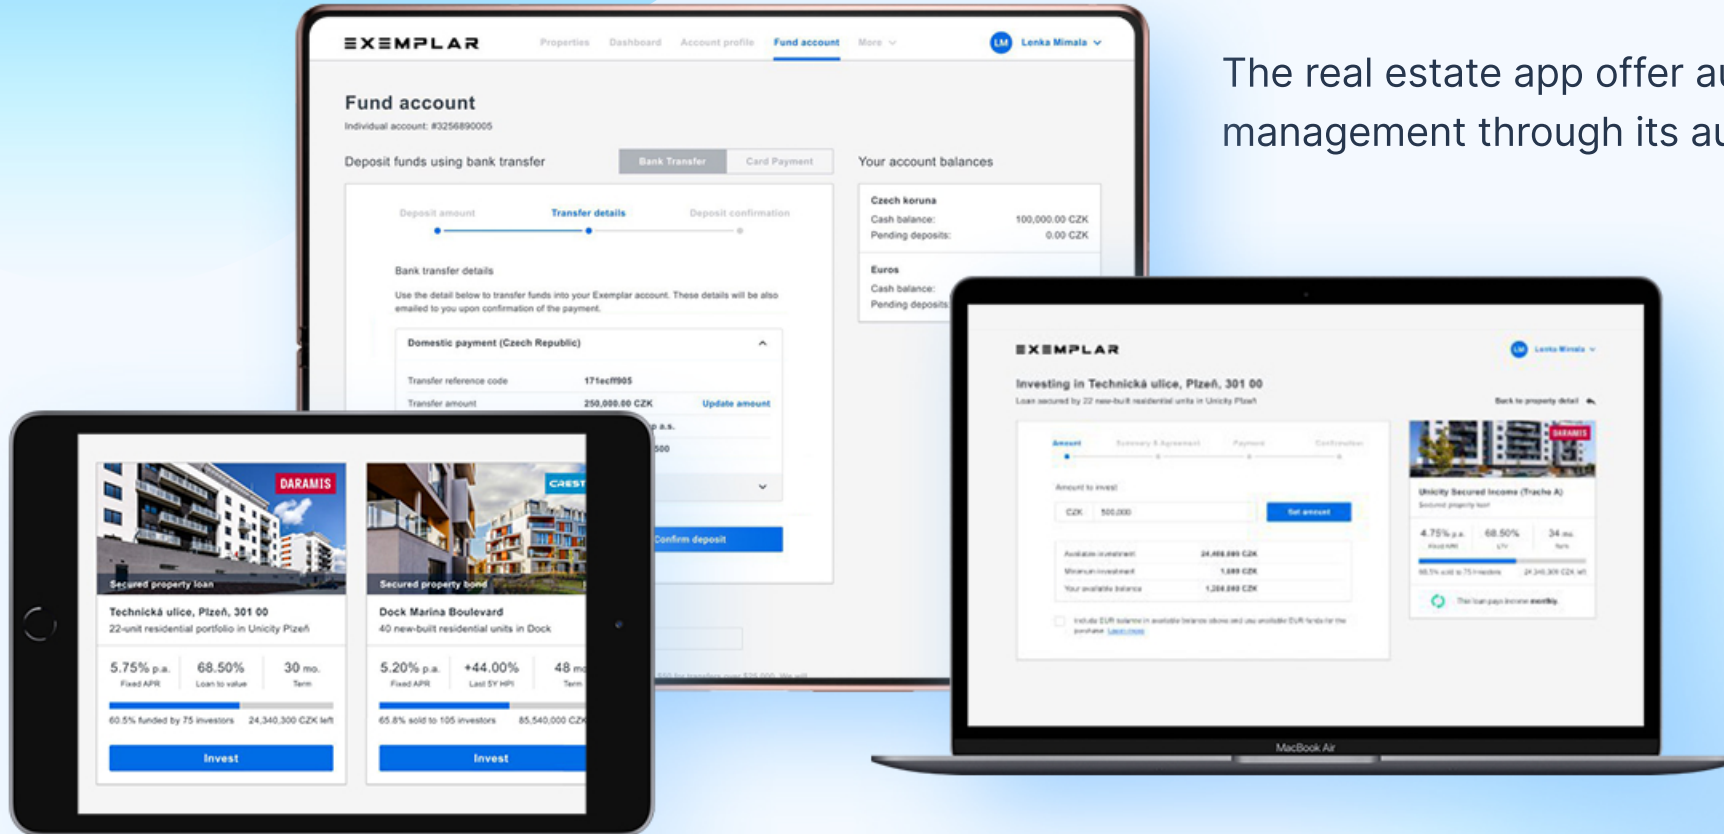

Business management software

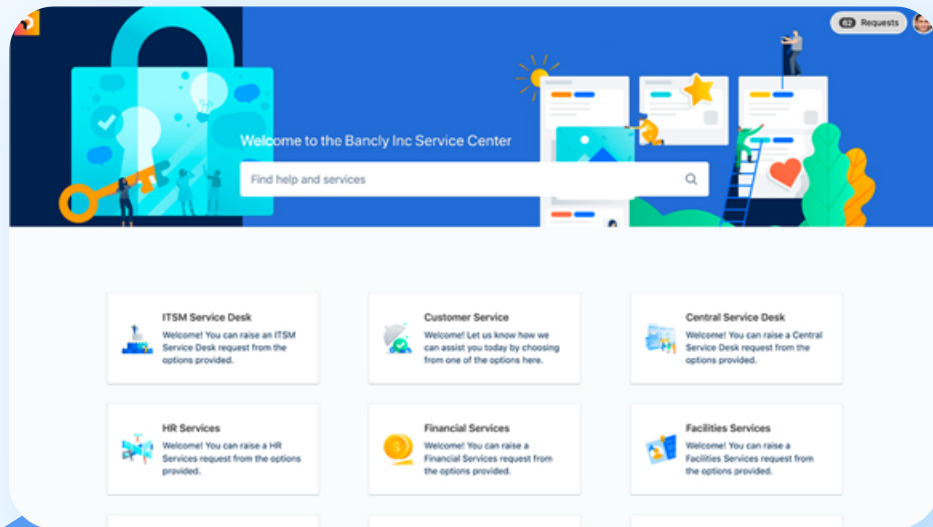

Company provides enterprise service market businesses with a complete POS, booking, and reservation experience integrated into one.

Real estate crowdfunding platforms

The real estate app offer automated investment management through its auto-invest feature

Support

Fogstream used **Redmine/Jira Service Management** for customer service.

Support included:

1. **Users support**
2. **Technical support**
3. **Updates**
4. **Retraining**

standart support or **24/7** depending on the terms of the contract

Thank you!
