

FOGSTREAM

Software & Electronics

About company

Specialization:

- Software and electronics development

Areas of development

Business systems

E-commerce

Engineering

IOT

ML, Blockchain

Types of services provided

Own projects

Training services

Engineering services

Contract development

2010

Founding of the company

2014

Direction
of Contract Development

2017

Started exporting
IT services

About the company

50

Number of developers

40+

Projects implemented

Technologies

Languages: **Python**

Framework: **Django Flask**

DB: **Postgresql MongoDB**

Frontend: **React Redux ExtJS**

Build and deployment: **Sentry Docker**

Methodology: **TDD CI Agile Waterfall FDD Code review**

Geography of delivery

Russia

Czech Republic

Cyprus

Hong Kong

New Zealand

Implemented projects:

- **Data collection and analytics issuance systems;**
- **Dispatching and working with cartographic data systems;**
- **Automatic aggregators of the commodity base with the calculation of delivery for online auctions;**
- **Working with machine learning for prediction or analytics;**
- **Custom electronics development;**
- **Work with image processing using neural networks.**
